

## It's finally here! On Tuesday, we welcome our Analysis Rules feature 🥳

This feature deprecates our “gap rules” feature and ushers in a new era of continuous evidence monitoring! From now on, you can:

- Eliminate any false positives
- Configure multiple rules per record
- Create fully customized rules
- Monitor a central repository of ‘failing’ evidence
- Rely on automatic evidence status updates

## So how does this change happen? 👁️

Starting from Tuesday, you will see the ‘monitoring’ tab in all pieces of evidence. Here, you can turn on/off library analysis rules, and also create your own custom rules. Your existing evidence collections will be updated to reflect the analysis rule results going **2 weeks back**. I.e, the last 2 iterations of the evidence (or more, if you have run the plugin on-demand in the last 2 weeks). If you turn on/off a library rule or create a custom rule, only the most recent evidence collection will be updated.

## Evidence status behavior ⚠️

In the initial rollout of this feature, any evidence statuses that have been **manually** set by you will not be impacted by analysis rule detections. However, any evidence that has not been manually set will **automatically change to ‘gap’** in the event of an analysis rule gap detection.

Approximately 2 weeks from now (once you have had time to fully set up all applicable analysis rules), detected gaps will automatically change the evidence status to ‘gap’, **regardless** of whether the status is the anecdotes default or set manually by you. We shall, of course, inform you once more prior to this change!

## Where should you start?! 🎉

1. For each automated evidence in your evidence pool:
  - Go to the ‘monitoring’ tab
  - Review any library rules and decide whether they apply to you (toggle on/off)
  - Configure any additional, custom rules you may require (note: you can clone and then modify library rules!)
  - Examine the analyzed evidence
2. Following weekly collections, filter the evidence pool according to evidence that is:
  - Gap
  - Warning
